

IDS makes communicating simple...

Customer:
Avox Limited

Website:
www.avox.info

Customer size:
More than 100 employees

Country or region:
Wrexham Industrial Estate

Industry: Data provider

Customer profile:
Avox Limited majority-owned subsidiary of Deutsche Börse Group, delivers validated, corrected and enriched business entity reference data for national and international clients, mostly in the financial sector.

"We conduct a great number of internet searches to gather information. If the system slows or there is a problem with the connection, it has a big impact on our business."

Greg Wenden, Head of Development,
Avox Ltd

IDS Case Study Avox Limited

Business entity data provider Avox turns to Carrier Wales, a trading name of IDS, for a more reliable internet connection with greater capacity to conduct online searches.

The Challenge

Avox Limited is a majority-owned subsidiary of Deutsche Börse Group, one of the world's leading exchange organisations. It provides premium quality business entity data for national and international clients, mostly in the financial sector. It employs a collaborative approach where clients contribute intelligence that is then verified by Avox's experienced team of data experts.

This verification requires constant internet searches of businesses, registries and regulatory data. Its previous internet connection was provided via multiple ADSL lines, but it often became choked with users and slowed down, and there was no back-up should the connection fail. Avox wanted a more reliable internet connection with equal or greater bandwidth and the scope to increase this easily in the future.

The Solution

Avox registered its interest on the FibreSpeed website, recognising the network's greater bandwidth capabilities and in-built resilience or back-up system that's part of the fibre-optic service. Carrier Wales, a leading FibreSpeed service provider, created a physical (wired) connection for Avox, without disruption to the business, using one of the network's connection points on Wrexham Industrial Estate.

Benefits

Thanks to Carrier Wales, Avox is now paying less for its internet provision using the FibreSpeed connection. Its team enjoys a reliable, dedicated 10 megabit internet service, which means it is not shared with other businesses or users and does not slow down because of other users. The automatic back-up should the connection fail for any reason gives Avox and its clients complete peace of mind, and the ability to increase the bandwidth without significant capital outlay means the technology can grow with the company.

Carrier Wales is one of the leading service providers appointed to access and provide services and solutions on the FibreSpeed optical fibre network. Thanks to Carrier Wales, many North Wales businesses are already harnessing the power of this technology and gaining a crucial competitive edge.
